

# Environmental Responsibility

As a Group we believe everyone should do their bit to help protect and sustain the environment. RKH commits to conducting business in such a way.

## Energy consumption

- We minimise our usage of non-renewable energy sources.
- We use water and energy efficiently.
- Where practical, low energy/high output lighting, sensor lighting, smart water usage, energy efficient cooling and heating systems and other such measures are used.
- Staff are encouraged to switch computer equipment off overnight to significantly reduce our carbon footprint.

## The RKH Group building

- Our London office boasts numerous environmentally friendly features, from movement sensed zone lighting to bathrooms serviced by harvested rain water.

## Waste and recycling

- Our offices contain no individual waste paper bins only recycling containers.
- We use recycled materials whenever possible.
- When reviewing contracts with suppliers and advisors, where appropriate we will consider third party CSR policies.

## Transport

- The RKH Group recognises the importance of minimising greenhouse gas emissions and congestion, staff are therefore encouraged to consider alternative forms and methods of transport, such as car sharing, park & ride, the 'cycle to work' scheme, public transport and travelling by foot wherever possible and practical.
- Our offices provide additional facilities for such purposes such as showers, secure cycle storage and lockers.
